huzaifa.30@iiee.edu.pk

Profesional Summary

Industrial Electronics Engineer with practical experience in industrial automation and control systems. Experience in PLC, SCADA, and DCS-based environments, including system configuration, testing, troubleshooting, and documentation. Brings a strong electronics background with the ability to translate control logic into reliable field execution.

Professional Experience

The Automators (Pvt) Ltd *Aug 2025 – Present*
Systems Engineer

- Worked on Honeywell Experion PKS and Honeywell LX systems for industrial control and monitoring applications.
- Designed the overall Experion PKS architecture, including controller structure, HMI hierarchy, communication layout, and control logic organization.
- Developed and implemented control logic based on process requirements and plant operation philosophy.
- Designed and configured HMI displays for operator monitoring, process visualization, alarms, and system navigation.
- Configured control system network architecture and communication settings to support reliable connectivity between Experion PKS controllers, servers, operator stations, and field communication devices.
- Supported DCS/SCADA configuration, testing, troubleshooting, and communication verification activities.

The Automators (Pvt) Ltd *Apr 2025 – Jul 2025*
Trainee Engineer

- Electrical CAD designing and OT networks designing and implementation
- The fundamentals of Distributed Control Systems (DCS) architecture and operation have been learned.
- Gained a better understanding of the plant processes and the overall plant workflow.
- Assisted with basic control logic, field instrumentation, and operator interface practices and implementation of server and client architecture
- Worked on Modbus communication setup and testing between field devices and control systems.
- Prepared technical documentation for system architecture, HMI development, control logic, and site support work.

Technology & Solution (Pvt) Ltd *Aug 2024 – Mar 2025*
System Engineer

- Learned fundamentals of Programmable Logic Controller (PLC) architecture and operation.
- Gained understanding of various processes.
- Assisted with basic control logic, field instrumentation, and operator interface practices.

Patex Boards (Pvt.) Ltd. *Apr 2024 – May 2024*
Automation Intern

- Assisted in troubleshooting and maintenance of electronic and automation systems for sheet manufacturing lines.
- Supported routine inspections and fault diagnosis of production machinery.
- Worked with engineers to improve machine reliability and production efficiency.

SAF International (Pvt) Ltd *Nov 2023 – Dec 2023*
Intern

- Gained exposure to industrial electrical and automation environments.
- Observed maintenance and operational activities related to terminal systems.
- Assisted engineering staff during routine technical tasks.

AutoCon (Control System Integration) *May 2023 – Jul 2023*
Trainee

- Received training on different PLC platforms and their industrial applications.
- Learned basics of industrial sensors and field instrumentation.
- Assisted in wiring, testing, and basic troubleshooting of control system components.

Education

NED University
Bachelor of Engineering (B.E.) in Industrial Electronic Engineering
Relevant Coursework: Instrumentation & Automation, PLC Systems, Hardware Design, Digital Electronics

Projects

DALDA Foods Limited *2026*
Control System Design & implementation — Technologies: Honeywell Experion PKS, C300 Controller, PLC Logic

- Logic Building for Tudra and DCD.
- Integration of the Honeywell C300 controller.
- HMI building and server/stations developing.
- Migration of Logic

Korangi Power Complex, K-Electric *2026*
System Maintenance — Technologies: Honeywell Experion PKS

- Provided maintenance support for the Honeywell Experion PKS control system.
- Checked system readiness, station health, communication status, and overall system availability.
- Assisted in troubleshooting and verification activities to ensure reliable plant operation.

UNICOL Distillery, Mirpurkhas *2025*
Control System Maintenance — Technologies: Honeywell Experion

- Performed control system maintenance and readiness checks for plant automation systems.
- Verified system health, communication status, and operator station functionality.
- Supported troubleshooting activities to ensure smooth and reliable system operation.

Pak Ethanol *2025*
Network Configuration & Redundancy Setup — Technologies: Industrial Network Switches, Redundancy Hardware

- Configured industrial network switches to support reliable control system communication.
- Set up redundancy hardware to improve system availability and communication reliability.
- Verified network connectivity, redundancy status, and communication paths between system components.

Faran Sugar Mill (FSML), Sheikh Bhirkio *2025*
Turbine Data Integration — Technologies: MOXA, Honeywell C300, Honeywell LX

- Integrated MOXA communication devices to enable live monitoring of turbine data on the Honeywell LX system.
- Assisted in communication setup, signal verification, and data mapping between field devices and the control system.
- Tested and validated real-time turbine data to ensure reliable visualization.

Faran Sugar Mill (FSML), Sheikh Bhirkio *2025*
Plant Control Logic Structuring — Technologies: Control Logic Documentation, System Structuring

- Documented plant control logic in a structured format for better readability, maintenance, and future troubleshooting.
- Organized logic sections and system references to support engineering review and operational understanding.
- Developed an HMI interfaces to present plant automation workflows and control system information in a clear, structured, and operator-friendly format.

The Automators *2025*
File Sharing Server — Technologies: TrueNAS

- Designed and deployed a centralized file-sharing server using TrueNAS to support internal data storage and access.

- Configured user access, shared directories, and permission levels for secure and structured file management.
- Integrated the NAS within the local network to provide reliable file access for engineering and office teams.

Pakitex Boards *2024*
Real-Time Plywood Thickness Profiling System — Technologies: SCADA, PLC, Laser Sensors

- Designed a laser triangulation-based system to monitor plywood thickness with approximately ± 0.1 mm accuracy.
- Integrated PLC and SCADA for real-time visualization, monitoring, and data logging.
- Improved quality monitoring by enabling automated thickness alerts and reducing manual inspection dependency.

Skills

- **Automation & Control:** PLC, SCADA, HMI, DCS,
- **Controllers & Platforms:** Siemens, Honeywell,
- **Software Tools:** TIA Portal, STEP 7, WinCC
- **Simulation & Modeling:** Proteus, NI Multisim, NI LabVIEW, MATLAB, Simulink
- **Design & Documentation:** AutoCAD, MS Visio, MS Word, LaTeX
